Architecture: Client Server

In a client-server architecture, tasks are divided between service providers, known as servers, and users, known as clients.

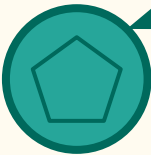

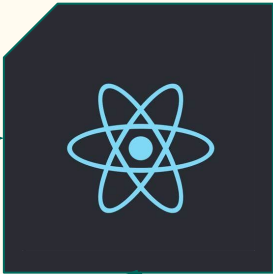

Database Server

Back-end Server

Front-end Server

User

User

Django

- Authentication app
- Admin app
 - Managing employees and vendors
- Project Leader app
 - Managing projects
 - Assigning tasks
- Team Member app
 - Updating tasks
 - Updating profile

Motivation

- Makes app extendable to different platforms
- If chosen, can be converted to Service-Oriented Architecture
